

DualLITE

PARAMOTOR
the adventure
machine

TARGET

The Dual LITE is designed specifically for adventurous paramotor teams. Its safety, performance, and weight have all been optimised for big paramotor flights and long paramotoring trips. It has the best launch/landing characteristics, handling, and performance we could pack into 6.35kg, so if you're looking for the best you can get your oily hands on, look no further.

DESCRIPTION

On your next paramotoring trip, extra fuel, food or beer could be packed in your bag in place of the 1.1 kg of weight we skimmed off the Dual. With a mix of carefully allocated 27, 34, and 40-gramme cloth, the DGAC/EN-B certified Dual LITE feels like a light version of its parent, the Dual - with self floating inflations, power steering, loads of feedback and ultra-efficient characteristics. Lightweight means literally effortless inflations, improved safety, higher performance, and overall easier manoeuvrability.
